

What is claimed is:

sb
13

1. A cellular phone for interchanging information with a base station included in a mobile communication system by radio, said cellular phone comprising:

a first speaker for selectively outputting a received speech or sound;

a second speaker for outputting sound; and

a controller for controlling output of a received speech or sound from said first speaker and said second speaker in accordance with sound setting selected beforehand.

2. The phone as claimed in claim 1, wherein the sound setting is to cause said first speaker to output a received speech or to cause said first speaker to output sound.

3. The phone as claimed in claim 2, further comprising:

a received speech amplifier and a sound amplifier connected to said first speaker for amplifying a received speech and sound, respectively; and

a sound amplifier connected to said second speaker for amplifying sound.

4. The phone as claimed in claim 3, wherein when said first speaker is assigned to a received speech, said controller causes a call incoming signal to be input only to said sound amplifier connected to said second speaker.

5. The phone as claimed in claim 4, wherein during conversation, said controller causes a received speech signal to be input only to

a sound amplifier connected to said second speaker for amplifying sound.

12. The phone as claimed in claim 11, wherein during conversation, said controller causes a received speech signal to be input only to said sound amplifier connected to said first speaker.

14. The phone as claimed in claim 13, further comprising:

a memory for storing data:

a digital-to-analog converter for digitizing an output signal of said signal processor and delivering a resulting digital signal

to said controller.

15. The phone as claimed in claim 10, wherein when said first speaker is assigned to sound, said controller causes a call incoming tone signal to be fed to said sound amplifier connected to said first speaker and said sound amplifier connected to said second speaker.

16. The phone as claimed in claim 15, wherein said controller causes a volume of the call incoming signal output from said first speaker to increase stepwise

17. The phone as claimed in claim 1, further comprising:

a radio section for interchanging information with a remote station via an antenna;

a memory for storing data;

a signal processor for executing preselected processing with a signal received via said radio section or reading data out of said memory to thereby generate a signal corresponding to said data; and

a digital-to-analog converter for digitizing an output signal of said signal processor and delivering a resulting digital signal to said controller.
